

MEPU GRAIN PIPE SYSTEM

Mepu RK grain pipes system is designed to handle both gravity feed and pneumatic conveying handling of grain dust and chaff. As gravity grain pipes, it is used in conjunction with Mepu elevators and conveyors. As pneumatic conveying, in conjunction with sucking/blowing fan units and Dust and Chaff Extractors. Mepu RK roll flange grain pipes system is available in three different sizes designated, RK160, RK200 and RK250. The numbers refer to the diameter in mm. The material in the grain pipes are stainless steel or galvanized steel. The RK roll flange grain pipes system can be connected to other similar system with roll flange

or L-flange. Using the quick release clamp, different components can be quickly connected together making a rigid sealed joint without the use of tools. All joints of the components in the system are pressed in the same tool giving a perfect fit.
